For the purposes of the Annual Report, Job Placement Rate is defined as the percentage of students who are employed in the year following completion of a CTE (career-technical education) certificate or degree program. (This means that the denominator for the 2021-2022 job placement rate will be the number of students who completed the program in 2020-2021.) Report only those programs with a minimum of 10 students in the completion year. For example, if a program had 9 students complete in 2020-2021, you do not need to report a job placement rate for 2021-2022. Report only those programs for which reliable data are available. If your institution has defined its job placement rate differently than what is described above, you may complete this question using your local definition provided that you describe this definition in Question 19.

Our institution has programs that meet these conditions.

20. Please use this text box to provide any comments regarding the data submitted in this report (optional, no limit).

Job placement data was gathered from the California Community College's Career Technical Education (CTE) (Perkins IV) dashboard. Data in each year is representative of rates for a cohort of students who had left the community college system in the year prior (e.g., because they earned an award or some other reason). For example, data for FY 18/19 would represent employment rates for students who left the system in spring 2018 and found employment in 18/19. Programs that did not have cohort sizes of ten students or more in the most recent year (FY 22/23) were not included here - because they did not have reliable data to be evaluated against our current/recent set standard.

By submitting this report on behalf of my institution, I confirm that the data and information contained herein is accurate and correct to the best of my knowledge. The institution acknowledges that knowingly submitting false or inaccurate data may result in notification to the U.S. Department of Education and/or accreditation action.
